„The Raccoon: A Natural History and An Unnatural Future“

***Prof. Sam Zeveloff, Weber State University, Utah
Fulbright Professor at the BOKU***

The common raccoon (*Procyon lotor*) is one of the most successful mammals in North America. Its distribution has substantially increased in the past few decades, and it thrives in human-dominated landscapes. Concomitantly, it has expanded its range as a non-native species in Europe, and is becoming numerous in Austria. In this presentation, Prof. Zeveloff reviews the raccoon's natural history, and the challenges it poses for wildlife management and society.

Zeit: 16. Jänner 2015 von 16.00-17.00 Uhr
Ort: Alte WU, Augasse 2-6, 1090 Wien
Hörsaal AQWU-EG/HO 5
