## § 1 QUALIFICATION PROFILE

The Master's programme in Applied Limnology and the International Joint Master's Programme in Limnology & Wetland Management are degree programmes which serve to deepen and extend students' pre-vocational academic education, building on the basis provided by a bachelor degree programme (§ 51 [2] item 5 of the Universities Act UG 2002, Federal Law Gazette BGBl I no. 81/2009). The programmes fulfil the requirements of Directive 2005/36/EC on the recognition of professional qualifications, article 11, letter e.

### 1a) Knowledge and personal and professional skills

The Master's programme in Applied Limnology and the International Joint Master's Programme in Limnology & Wetland Management convey fundamental and applied knowledge of aquatic ecosystems (streams/rivers, lakes and wetlands). Students shall get insight into the essential functions and processes of chemical/physical and biotic system components, as well as their interactions. They shall further get to know the principles of nutrient dynamics, water quality and habitat characteristics. Students learn to describe aquatic organisms (fish, planktic and benthic invertebrates, aquatic plants and algae) and their ecological demands, as well as their relations to the abiotic system components in order to detect systemic links. They learn to identify and critically examine human impacts as well as to evaluate their consequences for ecosystems. Based on this, students shall develop measures for the protection and the restoration of aquatic ecosystems in terms of ecologically orientated water management concepts.

Graduates will be equipped with the competencies to:

- describe how hydrology, morphology and aquatic organisms relate to biochemical processes and ecological functions of inland aquatic ecosystems;
- summarise provisioning and regulating ecosystem services provided by inland surface waters and wetlands;
- evaluate how catchment land use, climate variability, invasive species and fisheries exploitation might impact on the ecology of lakes, rivers and wetlands;
- evaluate anthropogenic impacts on rivers, lakes and rivers;
- think critically in evaluation of results, information derived from the literature and other sources, and for problem-solving of complex issues related to aquatic ecosystems;
- design sampling strategies for the cost-effective monitoring of aquatic ecosystems, that can support and inform policy objectives;
- meet deadlines through independent and efficient time management;
- effectively plan, organise and conduct a research project that has clear aims and objectives;
- write a thesis and reports, and present seminars to a professional standard;
- collate stakeholder views and integrate potentially conflicting objectives for the efficient and sustainable use of lakes, rivers and wetlands using concepts of an environmental management system, including management objectives for realistic action plans;
- work effectively in an interdisciplinary team; and
- provide effective, rational and evidence-based arguments, and be able to present these to a variety of audiences.

Graduates of the International Joint Master's Programme in Limnology & Wetland Management will be equipped with additional skills to:

- evaluate the usefulness of wetlands as treatment systems of waste water;
- produce a wetland management plan;
- evaluate anthropogenic impacts on rivers, lakes and rivers in both temperate and tropical settings;
- apply their knowledge and scientific skills in international and multicultural teams and different socio-cultural environments;
- evaluate the interaction of environmental and socio-economic challenges in both developed and developing countries; and
- contribute to global development efforts (MDG's - Millennium Development Goals; policies & programmes of national and international development cooperation agencies).

### **1b) Professional qualifications**

The Master's programme in Applied Limnology and the International Joint Master's Programme in Limnology & Wetland Management qualifies students to pursue the following professional activities: dealing with freshwater ecological issues in public and private bureaus, governmental departments, international authorities, water management and ecological planning offices, NGOs, international organisations and scientific institutions. The field of activity comprises all relevant freshwater ecological tasks arising from national, European (especially the Water Framework Directive) and international laws, directives and other commitments.

## **§ 2 ADMISSION REQUIREMENTS**

For graduates of bachelor's programs, mastery of the following learning outcomes is required for admission:

- Identify and systematically categorise essential groups of plants and animals, as well as describe their anatomical and physiological characteristics, and to understand similarities and differences;
- Comprehend significant interrelations between organisms and their environment on the level of autecology, synecology and population ecology, as well as evaluate their basic roles for the functioning of ecosystems;
- Discuss fundamentals of the structure (abiotic and biological components) and ecological functioning of freshwater ecosystems;
- Understand basics of inorganic and organic chemistry, as well as understand essential physiological and biogeochemical processes;
- Comprehend fundamental environmental processes such as, climate, water cycle and basic hydrology);
- Apply mathematics and statistical methods to perform explorative and descriptive data analyses, calculate and interpret simple ecological models;
- Recognise and describe types of rocks and soils, as well as understand essential processes of rock and soil formation and its implications for the shaping of the environment; and
- Understand fundamentals of geographic information systems and apply GIS software.

In addition, the proof of English knowledge at level B2 (Common European Framework of Reference for Languages) must be provided.

## § 3 PROGRAMME STRUCTURE

### 3a) Duration, total ECTS credits, and structure

The Master's programme in Applied Limnology and the International Joint Master's Programme in Limnology & Wetland Management consist of courses and other requirements worth a total of 120 ECTS credits. This is equivalent to a duration of four semesters (a total of 3,000 60-minute credit hours).

The Master's programme in Applied Limnology is divided into

|                     |                 |
|---------------------|-----------------|
| Compulsory courses: | 40 ECTS credits |
| Master's thesis:    | 30 ECTS credits |
| Elective courses:   | 36 ECTS credits |
| Free electives:     | 14 ECTS credits |

The International Joint Master's Programme in Limnology & Wetland Management is divided into

|   |                 |
|---|-----------------|
| Compulsory courses at BOKU:               | 27 ECTS credits |
| Compulsory courses at Egerton University: | 26 ECTS credits |
| Compulsory courses at IHE-DELFT:          | 23 ECTS credits |
| Master's thesis:                          | 30 ECTS credits |
| Free electives:                           | 14 ECTS credits |

### 3b) Three-pillar principle

The three-pillar principle is the central identifying characteristics of both the bachelor's and master's programmes offered at the University of Natural Resources and Life Sciences, Vienna. In the master's programmes, the sum of the compulsory and elective courses must be made up of at least

15% technology and engineering  
15% natural sciences  
15% economic and social sciences, law

The master's thesis, compulsory internship and free electives are excluded from the three-pillar rule.

### 3c) Joint degree programmes

The International Joint Master's Programme in Limnology & Wetland Management is implemented jointly by BOKU (Austria), Egerton University (Kenya) and IHE-DELFT (The Netherlands). Graduates receive a Joint Master's Degree in Limnology & Wetland Management from the three partner institutions.

### 3d) Courses with a restricted number of participants

For courses with a restricted number of participants, the instructor of a master's level course is entitled to give first priority to students enrolled in a master's programme (i.e. students enrolled in a bachelor's programme will only be admitted to the course if places are still available after all master's level students have been accommodated). When accepting master's programme students into a course, the following priority criteria with regard to the students' course requirements shall be applied: compulsory course, elective course, free elective.

## § 4 COMPULSORY COURSES

The Master's programmes comprise the following compulsory courses:

### 4.1 COMPULSORY COURSES AT BOKU: AL & LWM

|  |                    |                    |              |              |
|--|--------------------|--------------------|--------------|--------------|
| <b>Module 1 (LWM1): Basics in limnology</b>                      | <b>Course type</b> | <b>ECTS points</b> | <b>Comp.</b> | <b>Comp.</b> |
| <b>Course name</b>   |                    |                    | <b>AL</b>    | <b>LWM</b>   |
| Limnology  | VU                 | 3                  | Yes          | Yes          |
| Limnochemistry and nutrient cycling                              | VU                 | 3                  | Yes          | Yes          |
| Ecology of aquatic systems                                       | VS                 | 3                  | Yes          | Yes          |
| <b>Module 2 (LWM2): Ecology of aquatic organisms</b>             | <b>Course type</b> | <b>ECTS points</b> | <b>Comp.</b> | <b>Comp.</b> |
| <b>Course name</b>   |                    |                    | <b>AL</b>    | <b>LWM</b>   |
| Taxonomy and ecology of benthic invertebrates                    | VU                 | 3                  | Yes          | Yes          |
| Ecology of fishes  | VO                 | 3                  | Yes          | Yes          |
| <b>Module 3 (LWM3): Basics in applied limnology</b>              | <b>Course type</b> | <b>ECTS points</b> | <b>Comp.</b> | <b>Comp.</b> |
| <b>Course name</b>   |                    |                    | <b>AL</b>    | <b>LWM</b>   |
| Physical environment of riverine landscape                       | VO                 | 2                  | Yes          | Yes          |
| Aquatic biomonitoring and –assessment                            | VO                 | 2                  | Yes          | Yes          |
| Human impacts in riverine landscapes                             | VO                 | 2                  | Yes          | Yes          |
| <b>Module 4 (LWM4): Aquatic ecosystem management</b>             | <b>Course type</b> | <b>ECTS points</b> | <b>Comp.</b> | <b>Comp.</b> |
| <b>Course name</b>   |                    |                    | <b>AL</b>    | <b>LWM</b>   |
| Water legislation  | VO                 | 2                  | Yes          | No           |
| Restoration and conservation of riverine landscapes              | VS                 | 3                  | Yes          | Yes          |
| Applications in river landscape management                       | VX                 | 2                  | Yes          | No           |

| <b>Module 6: Research proposal &amp; master's thesis seminar</b> | <b>Course type</b> | <b>ECTS points</b> | <b>Comp.</b> | <b>Comp.</b> |
| <b>Course name</b>   |                    |                    | <b>AL</b>    | <b>LWM</b>   |
| Research proposal  | VS                 | 3                  | Yes          | No           |
| Master's thesis seminar  | SE                 | 3                  | Yes          | No           |

*Comp. = compulsory; AL= Master's programme in Applied Limnology; LWM = international Joint Master's Programme in Limnology & Wetland Management.*

## 4.2 COMPULSORY COURSES AT EGERTON UNIVERSITY: LWM

| Module LWM6: Lake ecology   | Course type | ECTS points |
|---|-------------|-------------|
| Course name   |             |             |
| Lake ecology  | VX          | 6           |
| Module LWM7: Ecology of streams and rivers  | Course type | ECTS points |
| Course name   |             |             |
| Ecology of streams and rivers   | VX          | 6           |
| Module LWM8: Wetlands for water quality   | Course type | ECTS points |
| Course name   |             |             |
| Wetlands for water quality  | VU          | 6           |
| Module LWM9: Fisheries & aquaculture  | Course type | ECTS points |
| Course name   |             |             |
| Fisheries & aquaculture   | VU          | 6           |
| Module LWM10: Fieldtrip on sustainable management and utilization of coastal ecosystems | Course type | ECTS points |
| Course name   |             |             |
| Fieldtrip on sustainable management and utilization of coastal ecosystems               | VX          | 2           |

List of compulsory modules for LWM (International Joint Degree Master's Programme in Limnology & Wetland Management) at Egerton University, Kenya. The modules are also elective modules for AL (Master's programme in Applied Limnology).

## 4.3 COMPULSORY COURSES AT IHE-DELFT: LWM

| Module LWM11: Aquatic ecology and bioassessment                   | Course type | ECTS points |
|---|-------------|-------------|
| Course name   |             |             |
| Aquatic ecology and bioassessment                                 | VU          | 5           |
| Module LWM12: Wetlands for livelihoods and conservation           | Course type | ECTS points |
| Course name   |             |             |
| Wetlands for livelihoods and conservation                         | VU          | 5           |
| Module LWM13: Integrated modelling of water and ecosocial systems | Course type | ECTS points |
| Course name   |             |             |
| Integrated modelling of water and ecosocial systems               | VU          | 5           |
| Module LWM14: Academic skill development                          | Course type | ECTS points |
| Course name   |             |             |
| Academic skill development  | VS          | 1,5         |
| Module LWM15: Interdisciplinary project & fieldwork               | Course type | ECTS points |
| Course name   |             |             |
| Interdisciplinary project & fieldwork                             | PJ          | 6,5         |

List of compulsory modules for LWM (International Joint Degree Master's Programme in Limnology & Wetland Management) at IHE-DELFT, The Netherlands. The modules are also elective modules for AL (Master's programme in Applied Limnology).

## § 5 ELECTIVE COURSES

### ELECTIVE COURSES APPLIED LIMNOLOGY

Elective courses worth a total of 36 ECTS credits are required to complete the Master's programme in Applied Limnology. Students are required to choose a minimum of 2 biological/limnological orientated modules (module 8, module 9, module 10, module 15, module 18, module 19, LWM 6, LWM 7, LWM 8, LWM 9). Students are required to choose one of the seminar-type modules, either module 11, or module 12. Modules/courses of the International Joint Master Degree Programme in Limnology & Wetland Ecosystems, which are given at Egerton University and IHE-Delft, are also eligible as elective courses for Applied Limnology.

|  |                    |                    |
|--|--------------------|--------------------|
| <b>Module 7: Ecohydromorphological monitoring</b>                        | <b>Course type</b> | <b>ECTS points</b> |
| <b>Course name</b>   |                    |                    |
| River habitat and landscape assessment                                   | VU                 | 4                  |
| Ecohydromorphological mapping  | VU                 | 2                  |
| <b>Module 8: Fish monitoring and assessment</b>                          | <b>Course type</b> | <b>ECTS points</b> |
| <b>Course name</b>   |                    |                    |
| Fish sampling and monitoring   | VU                 | 3                  |
| Fish ecological status assessment  | VU                 | 3                  |
| <b>Module 9: Benthic invertebrate monitoring and assessment</b>          | <b>Course type</b> | <b>ECTS points</b> |
| <b>Course name</b>   |                    |                    |
| Benthic invertebrate sampling and monitoring                             | VU                 | 3                  |
| Benthic invertebrate status assessment                                   | VU                 | 3                  |
| <b>Module 10: Aquatic plants</b>   | <b>Course type</b> | <b>ECTS points</b> |
| <b>Course name</b>   |                    |                    |
| Ecology of aquatic plants  | VU                 | 2                  |
| Ecology of algae   | VU                 | 2                  |
| Ecology, restoration and conservation of aquatic and riparian vegetation | VU                 | 2                  |
| <b>Module 11: Environmental impacts on riverine ecosystems</b>           | <b>Course type</b> | <b>ECTS points</b> |
| <b>Course name</b>   |                    |                    |
| Environmental impacts on riverine ecosystems I                           | SE                 | 4                  |
| Environmental impacts on riverine ecosystems II                          | SE                 | 2                  |
| <b>Module 12: Restoration &amp; conservation of riverine landscapes</b>  | <b>Course type</b> | <b>ECTS points</b> |
| <b>Course name</b>   |                    |                    |
| Restoration and conservation of riverine landscapes I                    | SE                 | 4                  |
| Restoration and conservation of riverine landscapes II                   | SE                 | 2                  |

|   |                    |                    |
|---|--------------------|--------------------|
| <b>Module 13: Planning and management</b>   | <b>Course type</b> | <b>ECTS points</b> |
| Course name   |                    |                    |
| GIS in riverscape planning  | VU                 | 2                  |
| Fish passes and continuity  | VU                 | 2                  |
| International land management   | VS                 | 1.5                |
| <b>Module 14: Inter- and transdisciplinarity</b>                                    | <b>Course type</b> | <b>ECTS points</b> |
| Course name   |                    |                    |
| Participatory methods in development research and practice                          | SE                 | 3                  |
| Systems science for participatory management of dynamic socio-ecosystems            | SE                 | 3                  |

## § 6 FREE ELECTIVES

### 6.1 FREE ELECTIVES APPLIED LIMNOLOGY

Free electives worth a total of 14 ECTS credits are required to complete the Master's Programme in Applied Limnology. Free electives may be selected from all courses offered by all recognised universities in Austria and abroad. Free electives are intended to impart knowledge and skills in the student's own academic subject as well as in fields of general interest. It is recommended to cover at least part of the free elective course requirements with courses from the elective modules offered within this curriculum.

### 6.2 FREE ELECTIVES LIMNOLOGY & WETLAND MANAGEMENT

Free electives worth a total of 14 ECTS credits are required to complete the International Joint Masters Programme in Limnology & Wetland Management. Students are free to choose elective courses at BOKU, Egerton University, IHE-DELFT, or any other recognised university. For students doing their MSc project at BOKU, the BOKU courses "Scientific reading and presentation in aquatic ecology", "Research proposal" and "Master's thesis seminar" are strongly recommended.

## § 7 MASTER'S THESIS

A master's thesis is a paper on a scientific topic, to be written as part of a master's degree programme (for exceptions please see the By Laws (Satzung) of the University of Natural Resources and Life Sciences, Vienna, part III- Teaching, § 30[9]). The thesis is worth a total of 30 ECTS credits. With their master's theses, students demonstrate their ability to independently address a scientific topic, both thematically and methodologically (§ 51 [8] UG2002 BGBl. I no. 81/2009).

The topic of the master's thesis shall be found in a subject of the master's study programme. The master's thesis is supervised by a person with a *venia docendi* in this subject (for exceptions please see the bylaws (Satzung) of the University of Natural Resources and Life Sciences, Vienna, § 86 [7]). Joint supervision by two persons with a *venia docendi* is also permitted if at least one of the two persons represents a subject of the master's study programme.

The topic of a master's thesis shall be chosen in such a way that it is reasonable to expect a student to be able to complete it within six months. Multiple students may jointly address a topic, provided that the performance of individual students can be assessed (§ 81 [2] UG 2002 BGBl. I no. 81/2009).

The master's thesis shall be written in English. Languages other than English are permissible only if approved and confirmed by the thesis supervisor. The thesis *defensio* must be held in English regardless of the language of the thesis.

## **§ 8 COMPLETION**

The Master's Programmes in Applied Limnology and in Limnology & Wetland Management have been completed when the student has passed all required courses and received a positive grade on the master's thesis and *defensio* examination.

## **§ 9 ACADEMIC DEGREE**

Graduates of the Master's Programme in Applied Limnology are awarded the academic title Master of Science, abbreviated as "MSc" or "M.Sc." by BOKU University. Graduates of the International Joint Master's Programme in Limnology & Wetland Management are awarded the academic degree "Master of Science", abbreviated as "MSc" or "M.Sc." by the three partner institutions BOKU, Egerton University and IHE-DELFT.

The academic degree "MSc" ("M.Sc.") shall follow the holder's name (§ 88 [2] UG 2002 BGBl. I no. 81/2009).

## **§ 10 EXAMINATION REGULATIONS**

(1a) The Master's Programme in Applied Limnology has been completed successfully when the following requirements have been met:

- positive completion of the compulsory courses worth a total of 40 ECTS credits (§ 4);
- positive completion of elective courses worth a total of 36 ECTS credits (§ 5);
- positive completion of free electives worth a total of 14 ECTS credits (§ 6); and
- a positive grade on the master's thesis and the *defensio* examination.

(1b) The International Joint Master's Programme in Limnology & Wetland Management has been completed successfully when the following requirements (corresponding to components in [7] below) are met:

- positive completion of the compulsory courses worth a total of 77 ECTS points (§ 4);

- positive completion of free electives worth a total of 13 ECTS points (§ 6);
- a positive grade on the master's thesis and the defensio examination.

(2) Student evaluation takes the form of course and module examinations. Course examinations can be either written or oral, as determined by the course instructor, taking the ECTS credit value of the course into account. Any prerequisites for admission to examinations shall be listed in § 4 under the respective course/module.

(3) Student evaluation in modules: Module evaluation is based on the grades given the students in the individual courses that make up the module. The total evaluation for the module is calculated as the average of the grades of all module courses, weighted by ECTS credits. Average values of .5 or lower are rounded to the better (numerically lower) grade; values of over .5 are rounded to the worse (numerically higher) grade. If deemed necessary, the Dean of Students may require a module examination at his/her discretion.

(4) The choice of examination method shall be based on the type of course: Lectures shall conclude with a written or oral examination, if continuous assessment of student performance is not applied. Seminars (SE) and project-based courses (PJ) can be evaluated based on independently written papers, length and contents of which are determined by the course instructor. For all other course types, the examination type is at the instructor's discretion.

(5) The topic of the master's thesis shall be selected from one of the subjects of the master's programme.

(6) After the successful completion of all the courses and examinations required in the master's programme, the completed master's thesis, after it has been given a positive evaluation by the thesis supervisor, shall be publically presented by the student and defensio in the form of an academic discussion (defensio). The committee shall consist of a committee chair and two additional university teachers with a *venia docendi* or equivalent qualification. The student's total performance (thesis and defensio) will be assigned a comprehensive grade. Both thesis and defensio must receive a passing grade for the student to complete the programme. The written evaluations stating the rationale for the thesis grade and the defensio grade are included in calculating the comprehensive grade and are documented separately.

The comprehensive grade is calculated as follows:

- Master's thesis: 70%
- Defensio (incl. presentation): 30%

(7) A comprehensive evaluation of the student's performance on the entire programme shall be assigned. A comprehensive evaluation of "passed" means that each individual component of the programme was completed successfully. If individual components of the programme have not been successfully completed, the comprehensive evaluation is "failed". A comprehensive evaluation of "passed with honours" is granted if the student has received no grade worse than a "good" (2) on all individual components, and if at least 50% of the individual components were graded with 1 (excellent/sehr gut). Students of the International Joint Master's Programme in Limnology & Wetland Management need to fulfil the distinction criteria of Egerton University and IHE-DELFT additionally.

## **§ 11 TRANSITIONAL PROVISIONS**

For students continuing their studies under the provisions of the previously valid curriculum, the list of equivalent courses (Äquivalenzliste) pursuant to a resolution of the Academic Programme Committee (Studienkommission) applies. This list includes all courses that

correspond to courses offered in the previously valid curriculum.

For students who switch to the new master's programme curriculum, examinations for courses taken under the provisions of the previously valid curriculum shall be recognised towards the new programme under the provisions of this curriculum based on the list of equivalent courses (Appendix C).

## **§ 12 EFFECTIVE DATE**

This curriculum shall take effect on 1.10.2023.

## **ANNEX A TYPES OF COURSES**

The following types of courses are available:

### **Lecture (VO)**

Lectures are courses in which certain areas of a subject and the methods used in this area are imparted through didactic presentation.

### **Exercise course (UE)**

Exercise courses are courses in which students are instructed in specific practical skills, based on theoretical knowledge.

### **Practical course (PR)**

Practical courses are classes in which students deal with specific topics independently, based on previously acquired theoretical and practical knowledge.

### **Compulsory internship seminar (PP)**

The compulsory internship seminar is a class in which students deal independently with topics related to their internship placements, based on previously acquired theoretical and practical knowledge.

### **Seminar (SE)**

Seminars are courses in which students are required to work independently on the respective subject, deepen their knowledge of the topic and discuss relevant issues.

### **Field trips (EX)**

Field trips are courses in which students have the opportunity to experience relevant fields of study in real-life practical application, to deepen their knowledge of the respective subject. Field trips can be taken to destinations both in Austria and abroad.

### **Master's thesis seminar (MA)**

Master's thesis seminars are seminars intended to provide students with academic support during the thesis writing process.

### ***Mixed-type courses:***

Mixed-type courses combine the characteristics of the courses named above (with the exception of project-type courses). Integration of different course-type elements improved the didactic value of these courses.

### **Lecture and seminar (VS)**

### **Lecture and exercise (VU)**

### **Lecture and field trip (VX)**

### **Project course (PJ)**

Project courses are characterized by problem-based learning. Under instruction, students work - preferably in small groups - on case studies, applying appropriate scientific methods.

### **Seminar and field trip (SX)**

### **Exercise and seminar (US)**

### **Exercise and field trip (UX)**

## ANNEX B MODULE DESCRIPTIONS

### B1. MODULES AT BOKU

|                                   |  |                       |                      |                   |                    |
|-----------------------------------|--|-----------------------|----------------------|-------------------|--------------------|
