## ***My five most important publications (with explanations)***

- 1) Steurer, R. (2002): Der Wachstumsdiskurs in Wissenschaft und Politik: Von der Wachstumseuphorie über 'Grenzen des Wachstums' zur Nachhaltigkeit („The Economic Growth Controversy in Science and Politics: From ‚Growthmania‘ to ‚Limits to Growth‘, to Sustainable Development“). Berlin: Verlag für Wissenschaft und Forschung [monography, 520 pages].

This is my Doctoral thesis published as a book. It is significant because it is an early work on which I have spent more time than on any other publication. Besides, its findings are still relevant and interesting.

- 2) Steurer, R. (2013): Disentangling governance: A synoptic view of regulation by government, business and civil society, in: Policy Sciences, 46/4, 387-410.

This article provides not only a synoptic view of different forms of regulation. It is also a synopsis of about 10 years of my own research on governance issues in the public and the private domain (therefore, it was originally the framework paper of my Habilitation). The article received the Harold D. Lasswell Prize as the “best article in Policy Sciences that contributes most to the theory and practice of the policy sciences” in 2013, as determined by a vote of the journal’s international editorial board.

- 3) Nash, S.L. & Steurer, R. (2021): Climate Change Acts in Scotland, Austria, Denmark and Sweden: the role of discourse and deliberation, in: Climate Policy, 21/9, 1120–1131 [listed in the SSCI].

This article summarises case studies on six climate change acts from four different countries. It shows that the unprecedented politicization of the climate policies in 2019 mattered more for improving climate change acts in Scotland and Denmark than the composition of their governments.

- 4) Casado-Asensio, J. & Steurer, R. (2014): Integrated strategies on sustainable development, climate change mitigation and adaptation in Western Europe: communication rather than coordination, in: Journal of Public Policy, 34/03, 437-473 [listed in the SSCI].

This article summarises many years of comparative research on the governance of sustainable development and combines it with findings on climate governance in the EU.

- 5) Steurer, R. & Martinuzzi, A. (2005): Towards a new pattern of strategy formation in the public sector: first experiences with national strategies for sustainable development in Europe, in: *Environment and Planning C: Government and Policy*, 23/3, 455-472 [listed in the SSCI].

This article is a good example for how I strived to publish journal articles out of policy consulting projects during my time at the Vienna University of Economics and Business. It also shows how I aimed to integrate management and political science. The editors of the journal nominated it for the Association of European Schools of Planning (AESOP) Prize for the best published paper in 2005.
