

# Master student wanted!

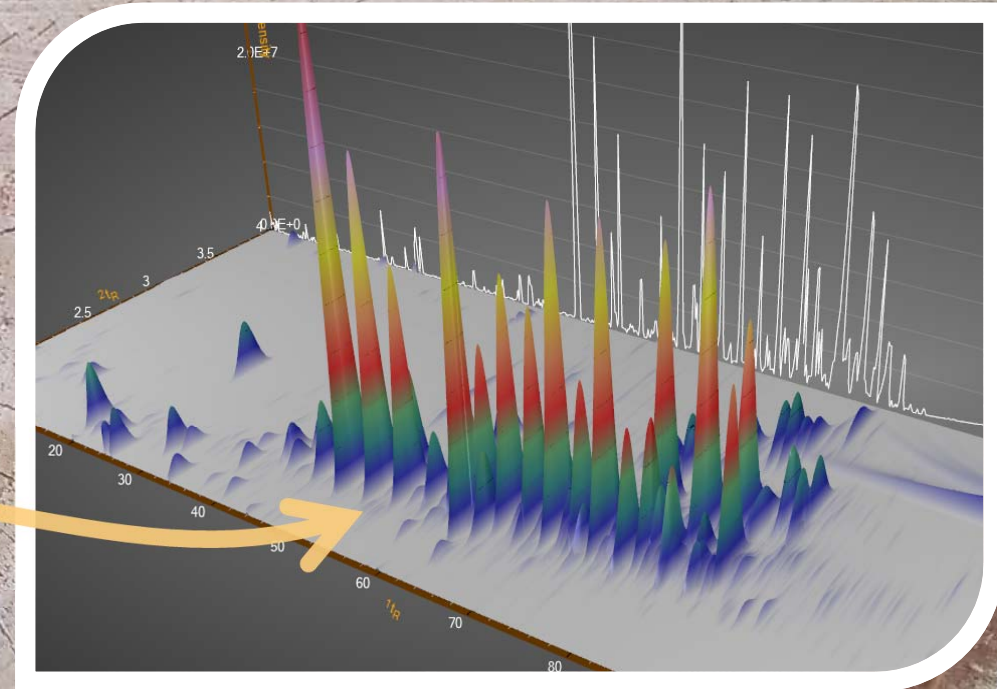

**ChRR**  
Institut für Chemie  
nachwachsender  
Rohstoffe

We want you to join our institute to investigate **plant extractives**, so that all parts of a plant can be used in a biorefinery.

Extractives are mixtures of many compounds, and we want to know more about them than is currently possible

You can work with a state-of-the-art instrument and will develop a **sophisticated GCxGC method** that will separate extractives like they have never been before, so that we can learn more about their composition.

Required are **technical skills**, the readiness to evaluate **complex chromatograms**, keeping an overview on the **data**, and a basic understanding of **organic chemistry**.
