

Zum Auftreten sekundär makropterer Individuen von *Euthystira brachyptera* (Caelifera: Acridoidea) auf der Perchtoldsdorfer Heide (Niederösterreich) [Evidence of macropterous specimens of *Euthystira brachyptera* (Caelifera, Acridoidea) in the Perchtoldsdorfer Heide (Lower Austria)]

A very local occurrence of macropterous *Euthystira brachyptera* was observed in a dry turf grassland in the Perchtoldsdorfer Heide (Lower Austria). This may be due to the microclimatical situation of the habitat, which favours crowding effects.
