Different natural disasters in recent decades have caused significant economic damage and claimed millions of lives worldwide. Even though natural disasters cannot be avoided completely, their potential damage can be minimized through various preventive measures and appropriate response measures during the disaster.

Our Natural Disasters summer school will bring together students from several countries, various educational levels (PhD, MSc), and study programmes. It is going to be a combination of blended learning supported by e-classroom (first week) and face-to-face learning (second and third weeks). The main topics to be discussed in the summer school are: flood-related disasters, droughts, landslides, and earthquakes.

Be part of this summer school and join this attractive, innovative, and active way of gaining knowledge and sharing experiences, where various aspects of natural disasters will be covered (engineering, natural sciences, sociology, and economy). The summer school corresponds to 5 ECTSs.

For more information about the summer school please visit the website, follow us on Facebook or contact us at: klaudija.sapac@fgg.uni-lj.si or mojca.sraj@fgg.uni-lj.si.
