# euROORGANIC

European Master in Organic Agriculture and Food Systems

## **About EUR-Organic:**

Farmers and consumers are increasingly interested in the quality of food and in the circumstances of its production. Environmental, health, and social questions are calling for solutions. For this reason, a growing amount of food is produced and processed according to the standards of organic farming.

Organic farming is based on a holistic approach, therefore the processing and marketing of organically grown food requires special skills and knowledge.

To meet this demand, five leading European universities in the field of Agriculture and Life Sciences have developed the EUR-Organic.
