

Invitation VIBT/ÖGMBT seminar

Muthgasse 18, 1190 Vienna
Seminar-room DAGZ (4th floor)
June 6th 2019, 11:30 h

Qiang Chen

The Biodesign Institute and School of Life Sciences

"Improving effector functions of antibodies against flavi- and alphaviruses"

Host: Herta Steinkellner

Department of Applied Genetics and Cell Biology

Prof. Chen specializes in developing novel human therapeutics and vaccines in plants. His team has developed monoclonal antibody variants that have improved brain targeting, reduced antibody-dependent enhancement (ADE) of viral infections, and enhanced efficacies against various viral infections.
