

How to change default property „Color“ on Printer Device “bokuprint-color auf ipp://printer.boku.ac.at” to greyscale

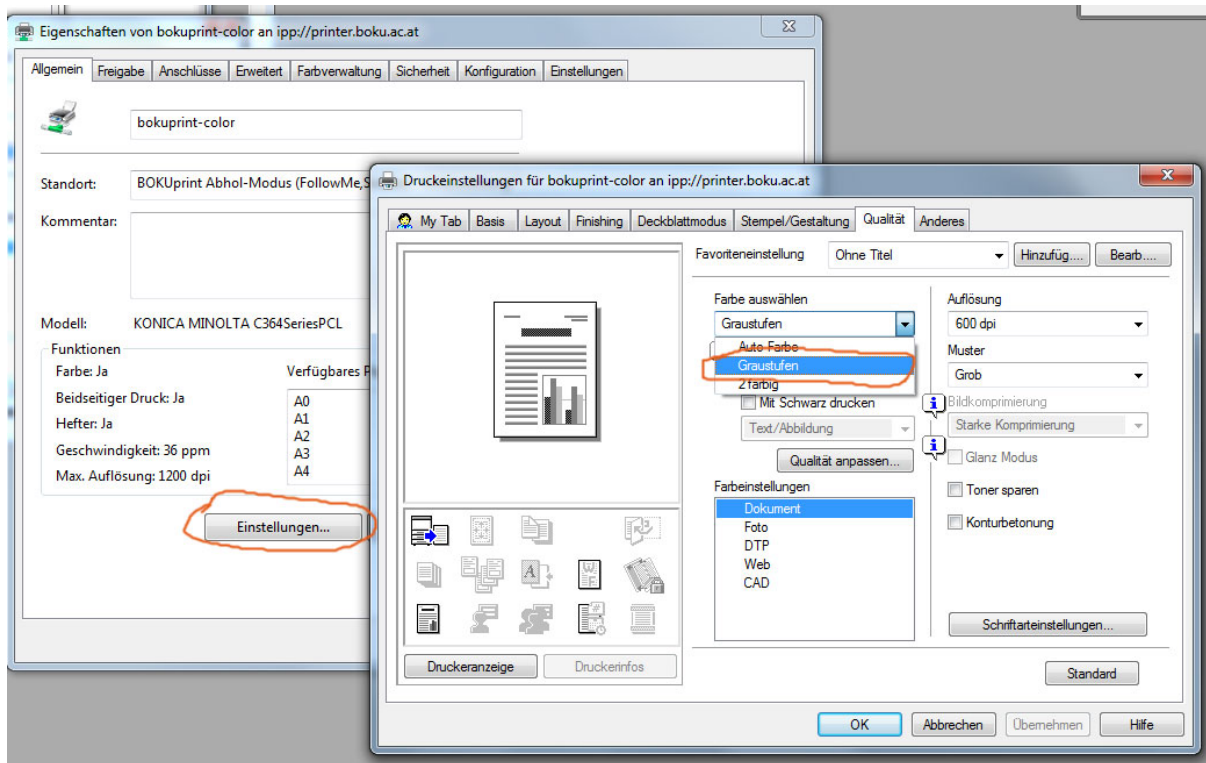

For reducing printing costs (printing with copying machines Konica-Minolta Bizhub) I would recommend to change the default settings in the printer-properties to “Graustufen”.

A small introduction will help you to achieve this.

1. Klick on “Start” - “Geräte und Drucker”
2. Right click on „Bokuprint-Color auf ipp://printer.boku.ac.at“

3. Klick on “Druckereigenschaften” (Properties)
4. Klick Button “Einstellungen” (Settings)
5. Klick on Tab “Qualität” (Quality)

6. Change Option to "Graustufen"
7. Close all the windows by clicking on "OK"

Please keep in mind - there are two possible ways to change this behavior.

The first (as described here) is durable.

For changing this option just for one session please use the property-dialog in your application, just before submitting the printing-job.
