2020

Priority 2 Environment and culture responsible Danube region

Examples of actions:

- Better integrate policies for the reduction of the total amount of pollution entering the Danube river basin. Joint monitoring of ecological and chemical status and joint development of measures to improve water quality and ecological status
- Better integrate policies to prevent deterioration of groundwater quality and the concentrations of pollutants in groundwater. Contribute to sound groundwater management and over abstraction of groundwater-bodies
- Encourage more effective information sharing, mutual learning and a sustainable approach to managing the risks of floods to protect human life and property while encouraging conservation and improvement of water related ecosystems
- Contribute to the common transboundary implementation of the Flood directive by better integrated and more effective, informative flood forecasting (going beyond projects supported in the previous periods), coordination of the operation of hydraulic structures, exchange of flood protection techniques, technologies and experiences, harmonisation of operative flood protection methods
- Contribute to proper fluvial and sediment management to track sediment transport and morphological changes along the river system
