Are you an undergrad, master student or young professional? Would you like to deepen your knowledge on the **Circular Economy** and learn how **digital technologies** (from AI to IoT) can empower more resilient, sustainable and inclusive agri-food systems?

If so, the **EIT Food Summer School** "**Digit4Circularity**" is for you!

The summer school will be delivered fully ONLINE and students will receive an official certificate.

After successfully completing Digit4Circularity, students will be able to:

- Understand the guiding principles of the **circular economy** and relate them to neighbouring concepts
- Investigate what it takes to create products that are easy to repair, refurbish, remanufacture, repurpose, recycle, or recover, using **digital technologies**
- Explain drivers and barriers for businesses to implement **circular business models** and **digital platforms** to cooperate and share data towards a circular approach
- Gauge the **macro-systemic effects** of the transition towards a circular economy
- Critically reflect upon the circular economy **impact** on the economic, environmental, and social side

The summer school will conclude with a final pitch event with prizes awarded to the winning teams. Students have the possibility of earning 5 CFU/ECTS.
