

BOKU saves energy

How can I save on heating?

On working days, set the heating to level 3: This corresponds to **20°C**.

Level 4 increases consumption by **24%**!

Level 2 at the end of work: This corresponds to **16°C**

It does not heat up any faster if the thermostat is turned up fully!

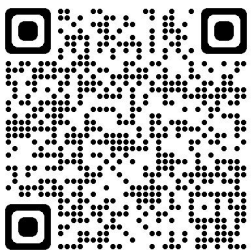

Avoid tilted windows: **Intermittent cross ventilation** is more efficient and saves energy.

Adapt your clothes to the season.

Keep radiators clear of furniture and objects.

Do not use radiant heaters - they consume much more energy!
