

SEMINAR

JEROME FAURE, VISITING ECONOMIST SPECILIZING IN AGROECOLOGY

TUE 25 FEB, 2025

15:00 - 16:00

ROOM : GUTH-SR 02 (GUTH-EG/14)

PAST WORK

During this seminar, I will first present my background and past experiences. My work takes place in the context of biodiversity loss and the decline of ecosystem services, driven by the intensification of human activities and their impact on ecosystems. At the intersection of economics and ecology, my research explores how to integrate natural processes into agricultural production systems, particularly by reducing reliance on artificial inputs, with a focus on the concept of nature-based solutions. In parallel, I am working on farmers' preferences regarding the agroecological transition, for example, through contingent evaluations, as well as on potential agricultural policies that could support this transition.

VISITING SCIENTIST,
ECONOMIST SPECIALIZING IN
AGROECOLOGY

MY CURRENT WORK IN BOKU

In the second part of my presentation, I will focus on my current research. This work examines the impact of input reduction on biodiversity and economic performance, in connection with innovative public policies. It is within this framework that I am conducting a visiting research stay at AFO, BOKU University, aiming to evaluate and design public policies that support the reduction of agrochemical inputs, while aligning with the objectives set by the EU Farm to Fork Strategy.
